Geometric camera models

16-385 Computer Vision Spring 2022, Lecture 9

Overview of today's lecture

- Some motivational imaging experiments.
- Pinhole camera.
- Accidental pinholes.
- Camera matrix.

Slide credits

Most of these slides were adapted from:

Kris Kitani (15-463, Fall 2016).

Some slides inspired from:

• Fredo Durand (MIT).

Some motivational imaging experiments

Let's say we have a sensor...

digital sensor (CCD or CMOS)

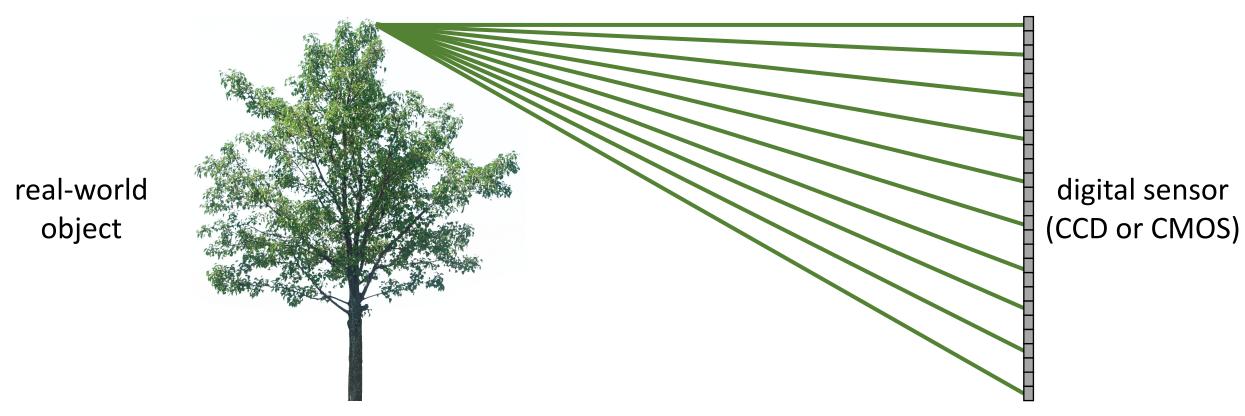

... and an object we like to photograph

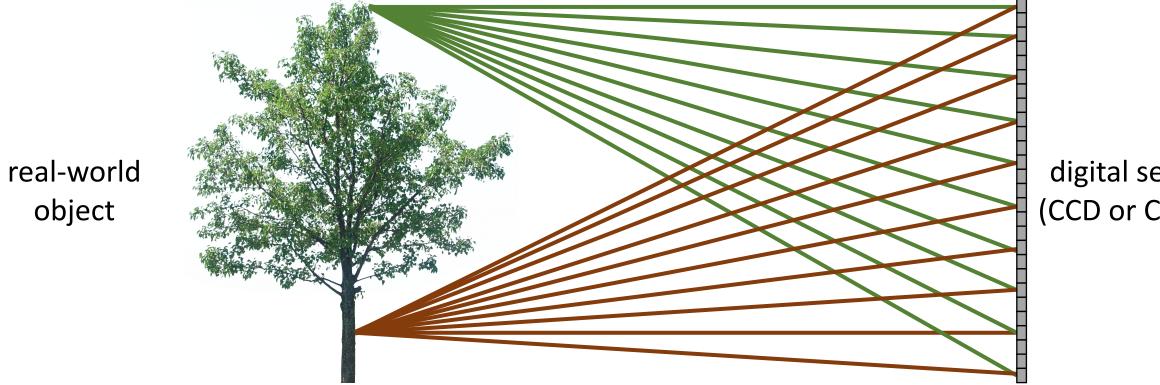

digital sensor (CCD or CMOS)

What would an image taken like this look like?

digital sensor (CCD or CMOS)

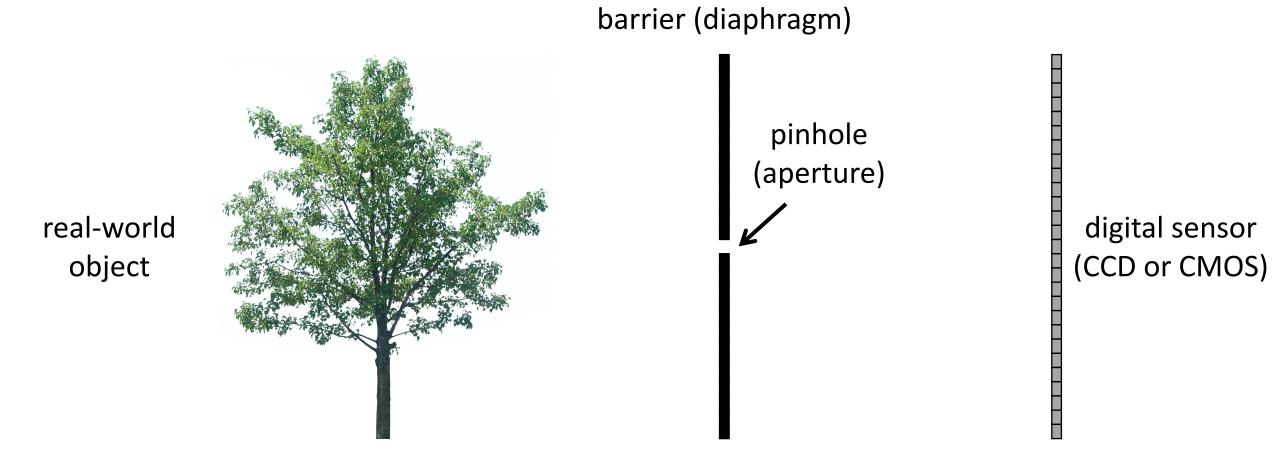

All scene points contribute to all sensor pixels

What does the image on the sensor look like?

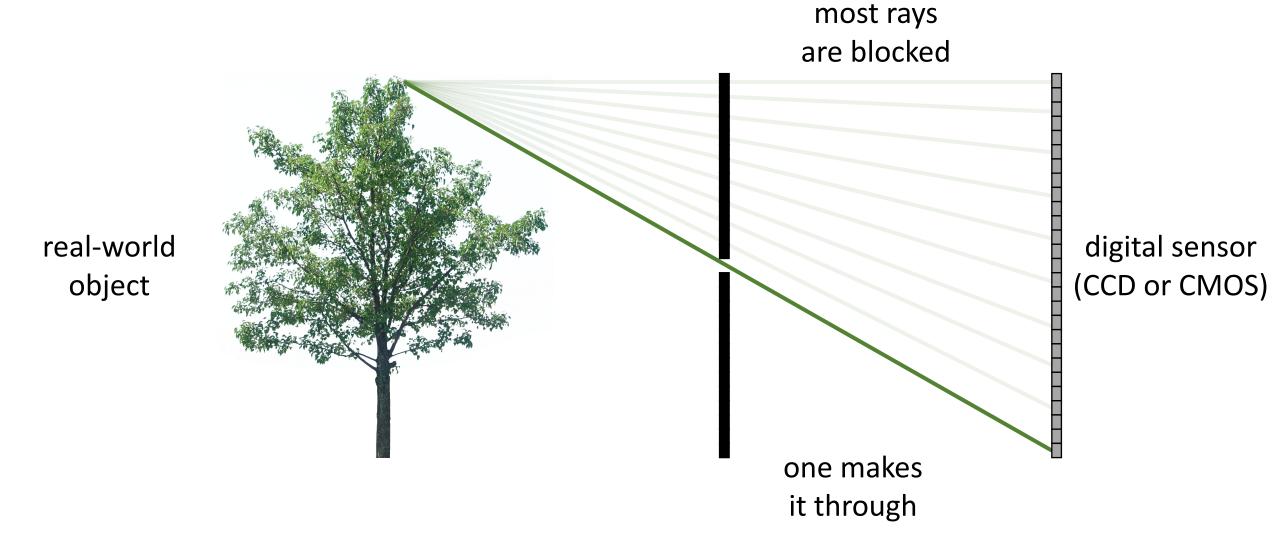

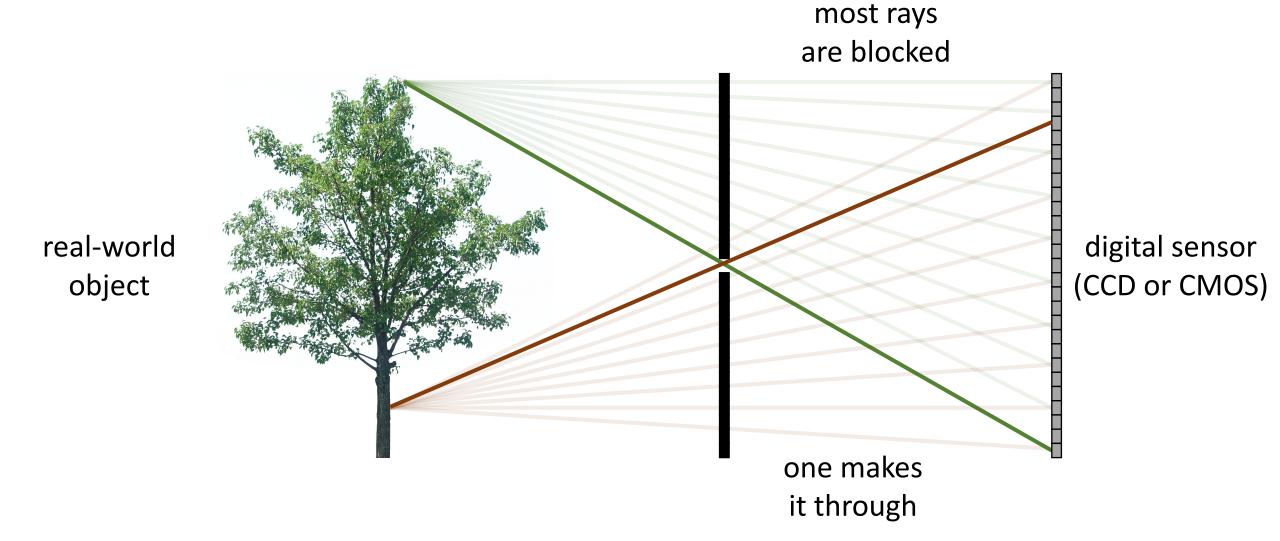

All scene points contribute to all sensor pixels

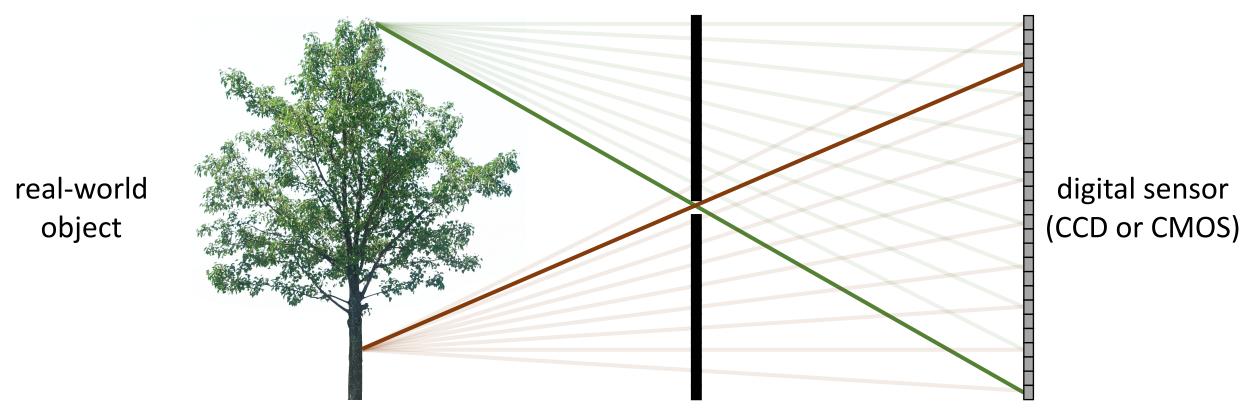

Let's add something to this scene

What would an image taken like this look like?

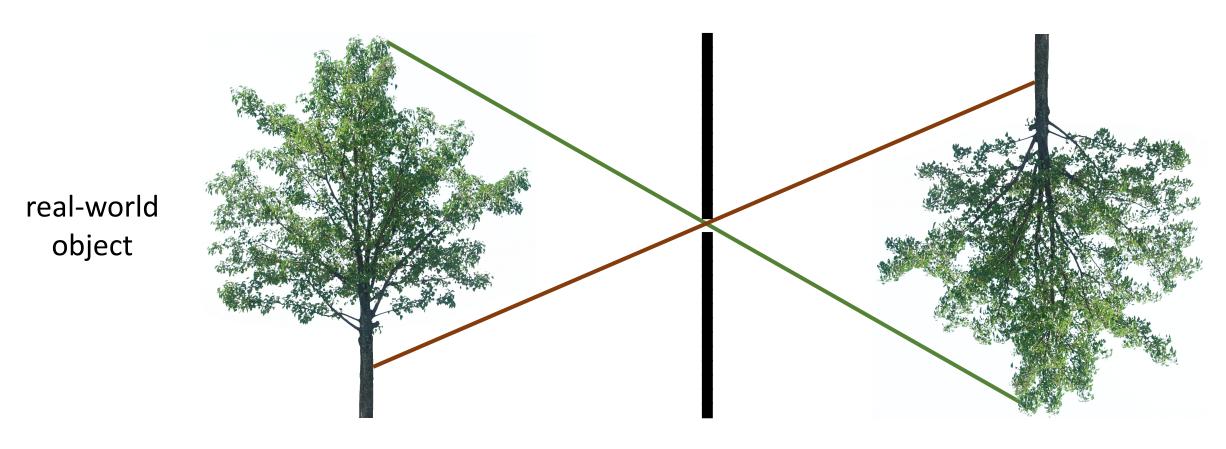

Each scene point contributes to only one sensor pixel

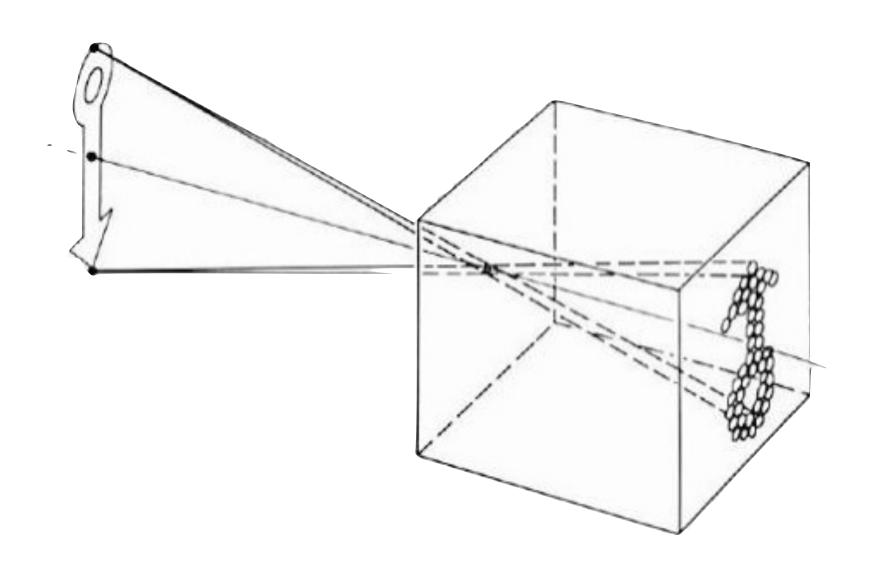

What does the image on the sensor look like?

copy of real-world object (inverted and scaled)

Pinhole camera

Pinhole camera a.k.a. camera obscura

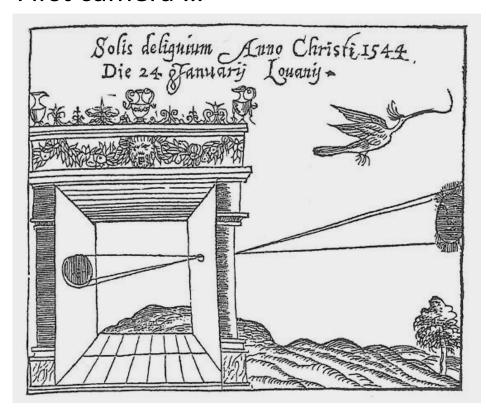

Pinhole camera a.k.a. camera obscura

First mention ...

Chinese philosopher Mozi (470 to 390 BC)

First camera ...

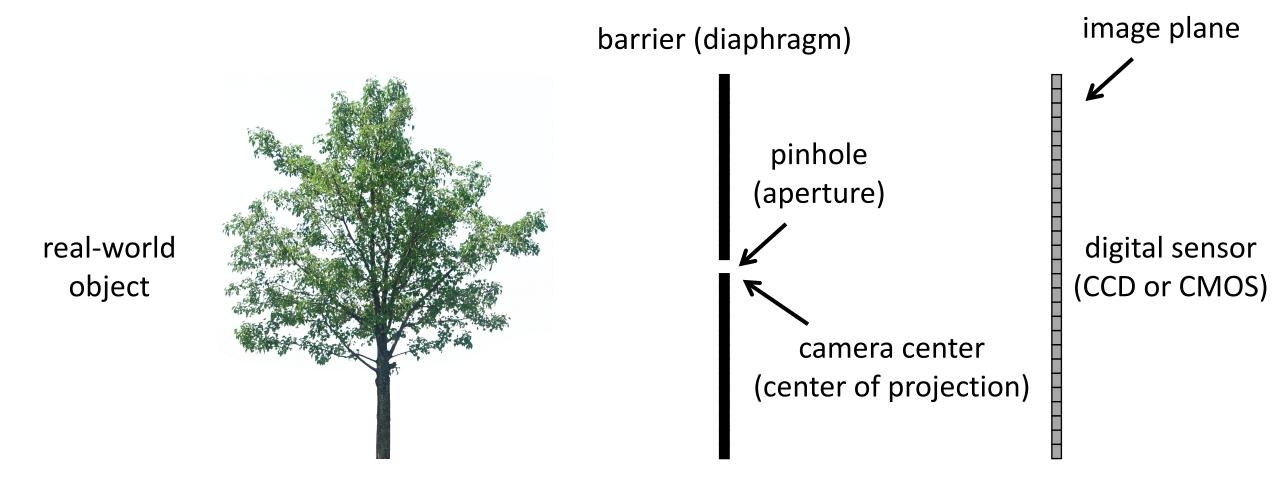

Greek philosopher Aristotle (384 to 322 BC)

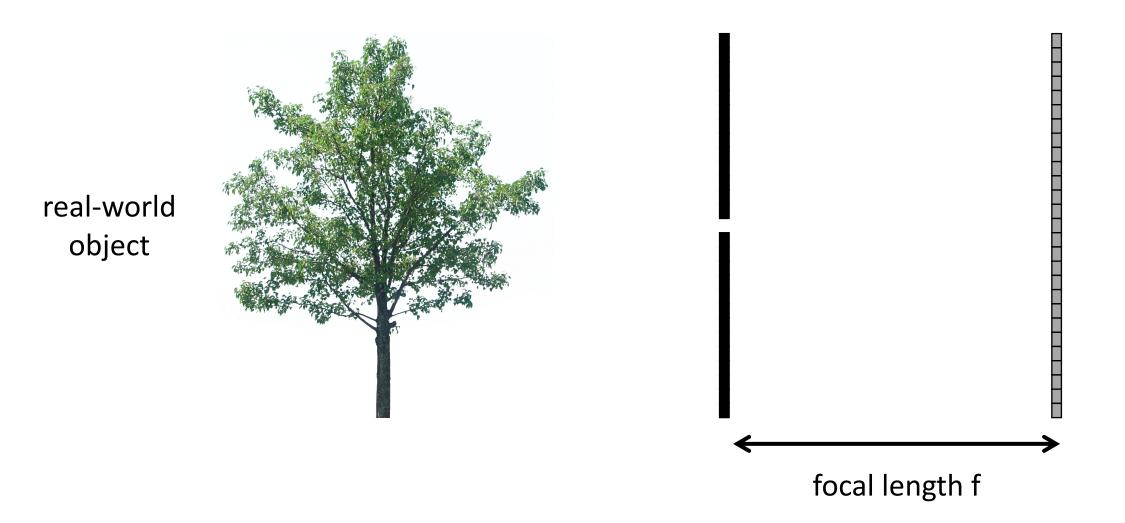

Pinhole camera terms

barrier (diaphragm) pinhole (aperture) real-world object

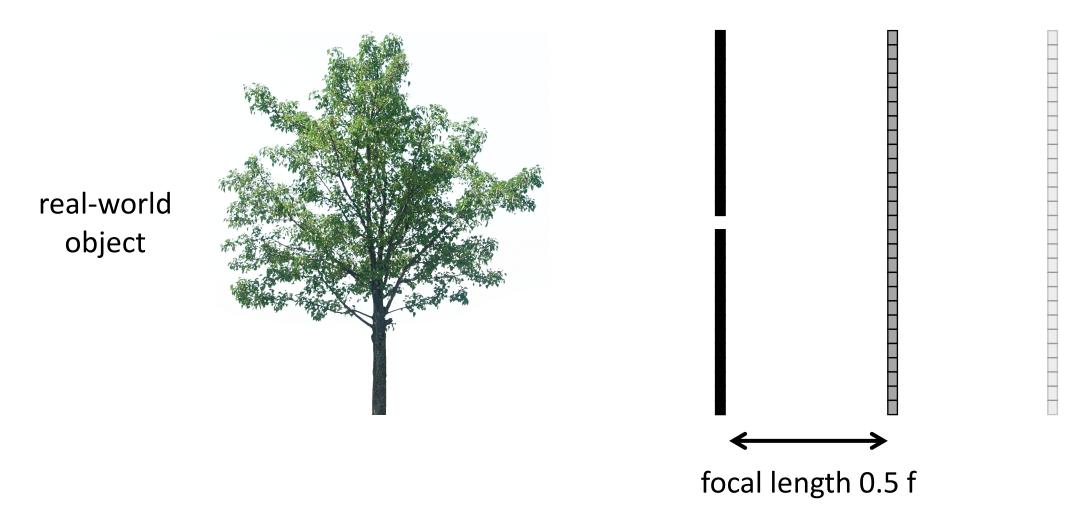

digital sensor (CCD or CMOS)

Pinhole camera terms

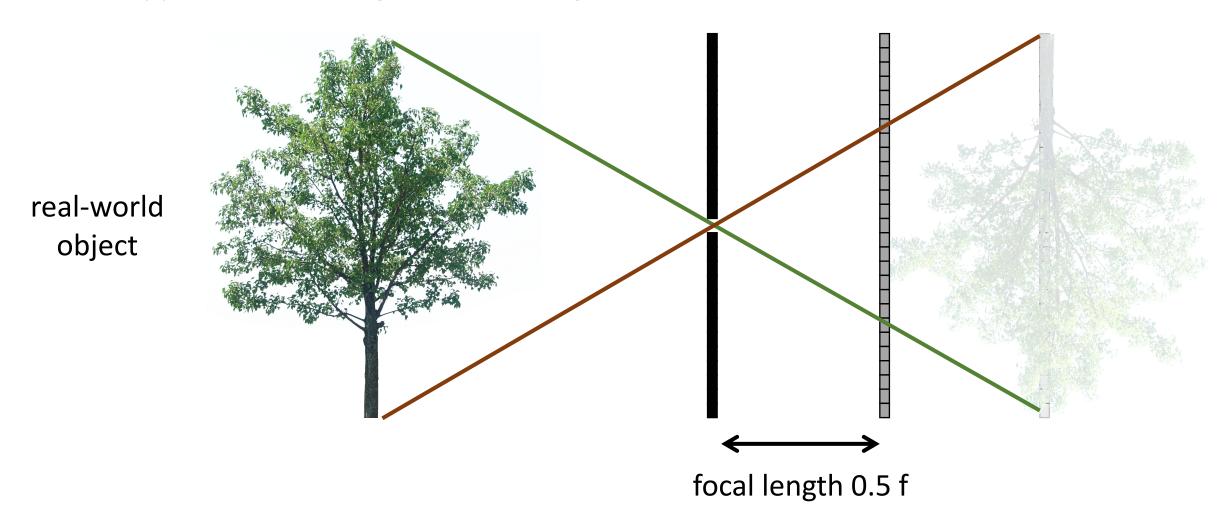

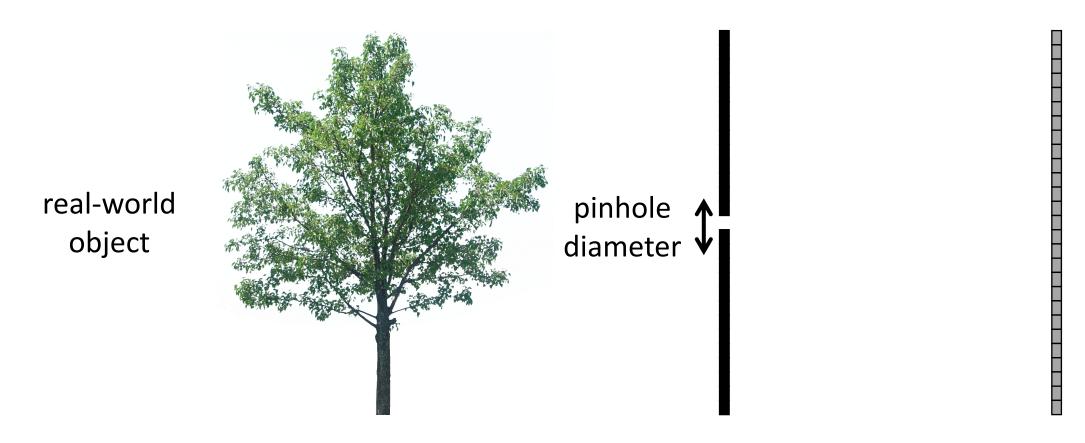

What happens as we change the focal length?

What happens as we change the focal length?

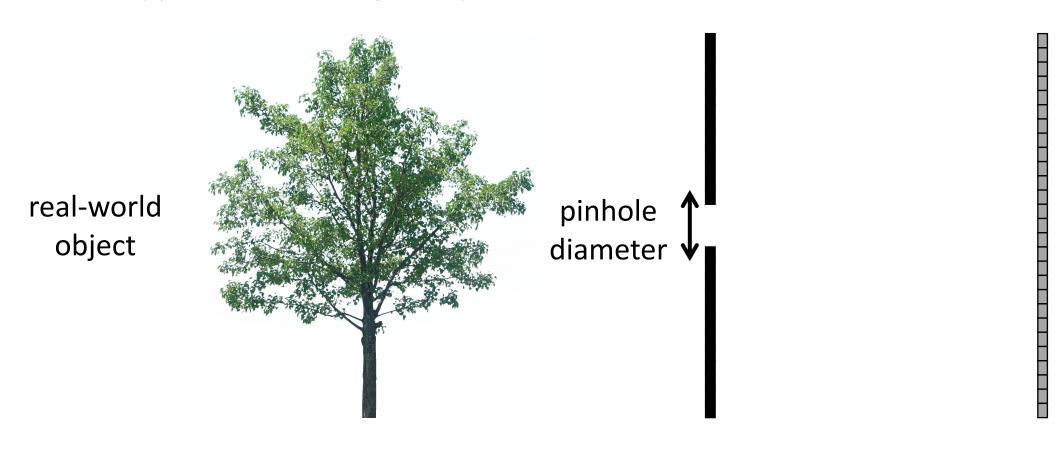

What happens as we change the focal length? object projection is half the size real-world object focal length 0.5 f

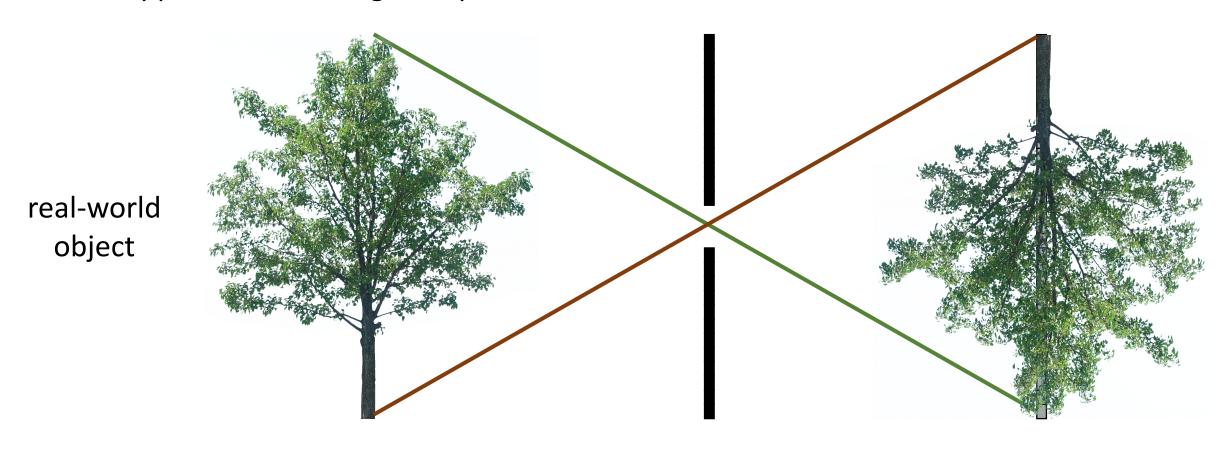

Ideal pinhole has infinitesimally small size

• In practice that is impossible.

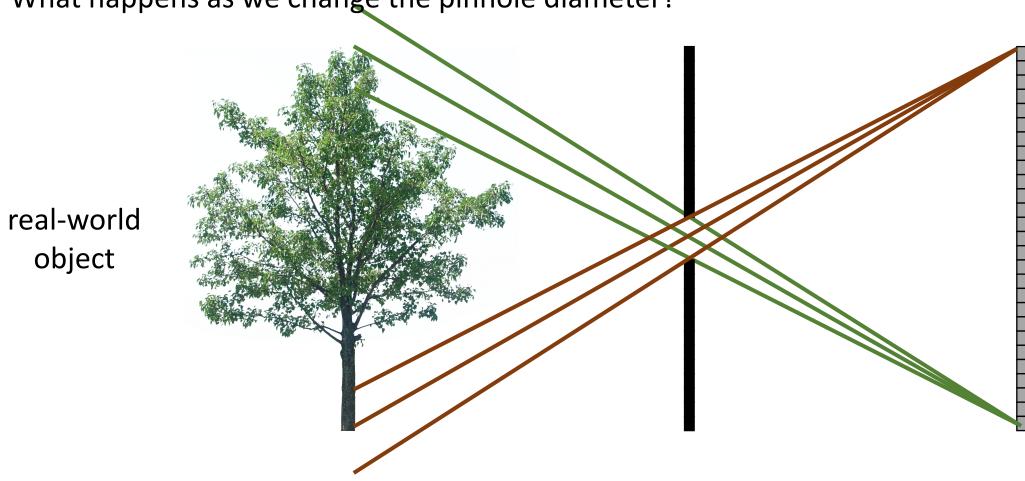

What happens as we change the pinhole diameter?

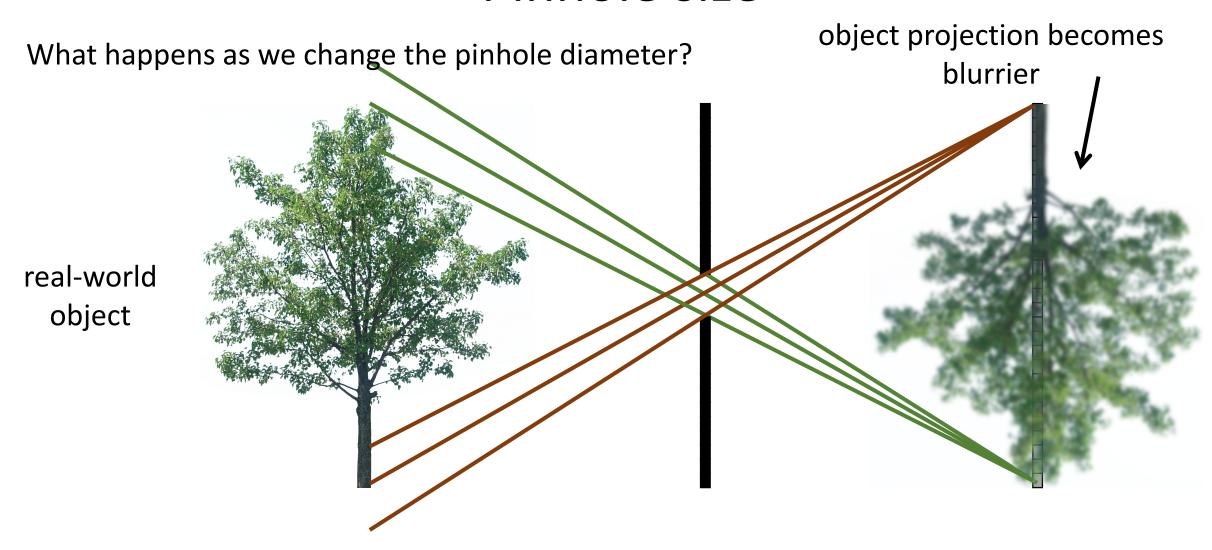

What happens as we change the pinhole diameter?

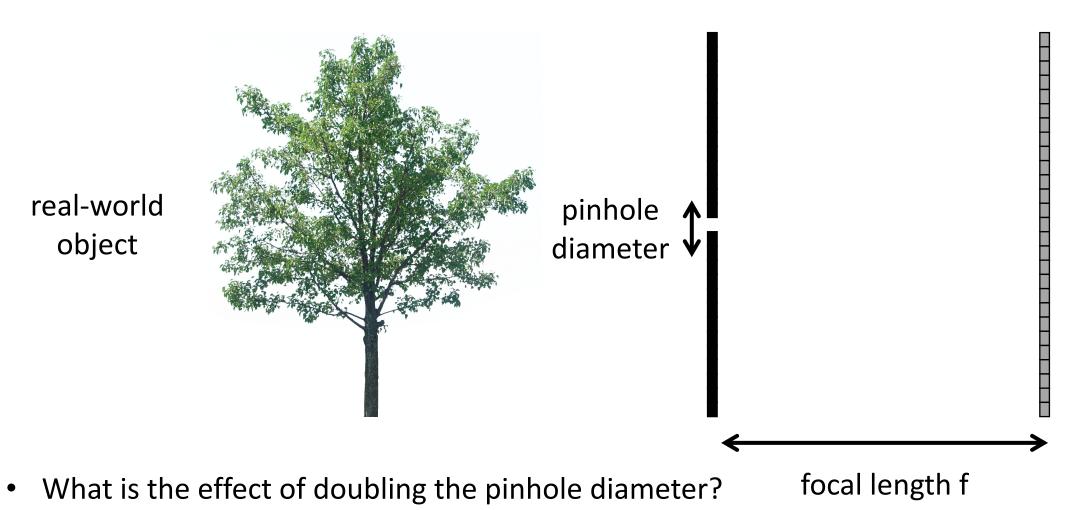

What happens as we change the pinhole diameter?

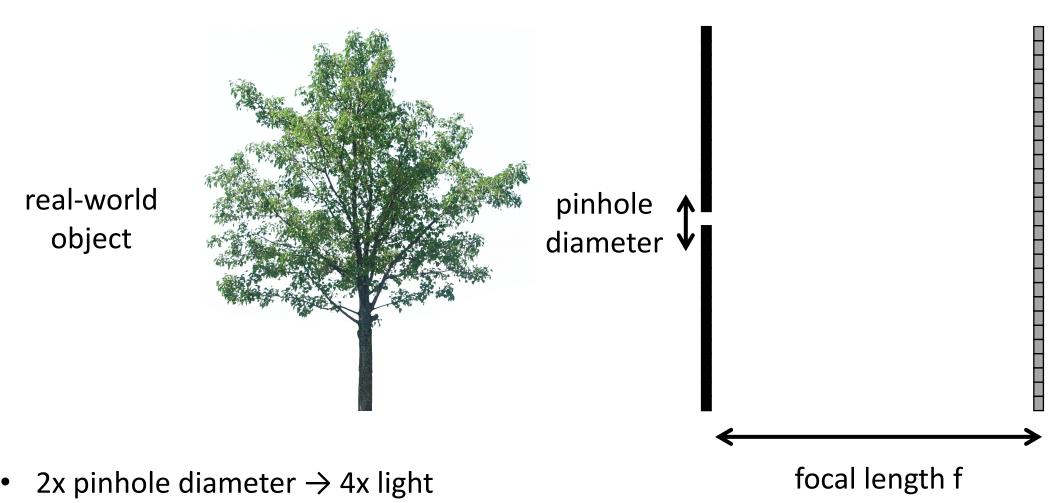

What about light efficiency?

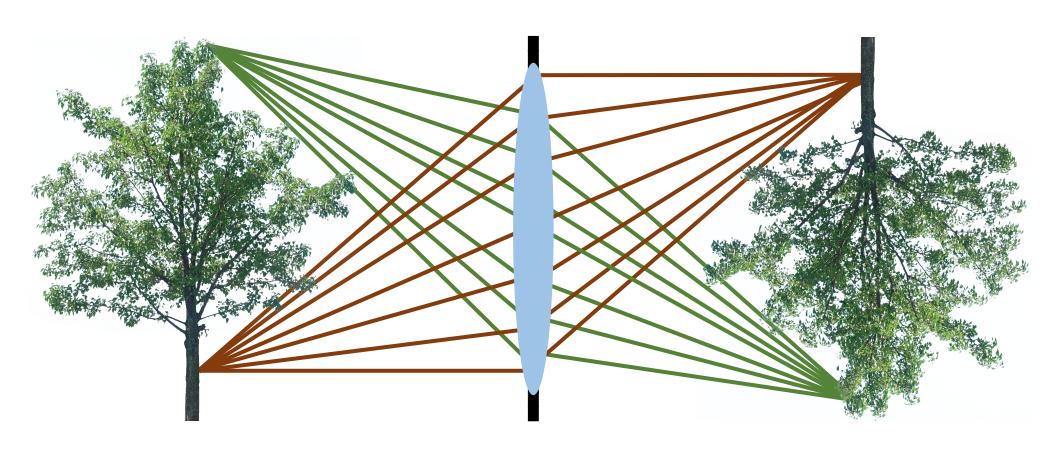

• What is the effect of doubling the focal length?

What about light efficiency?

• 2x focal length $\rightarrow \frac{1}{4}x$ light

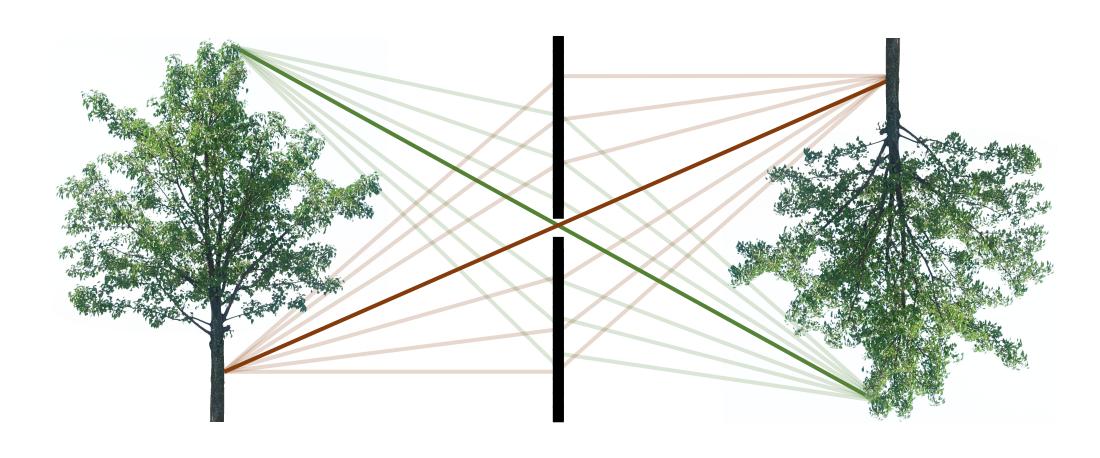

The lens camera

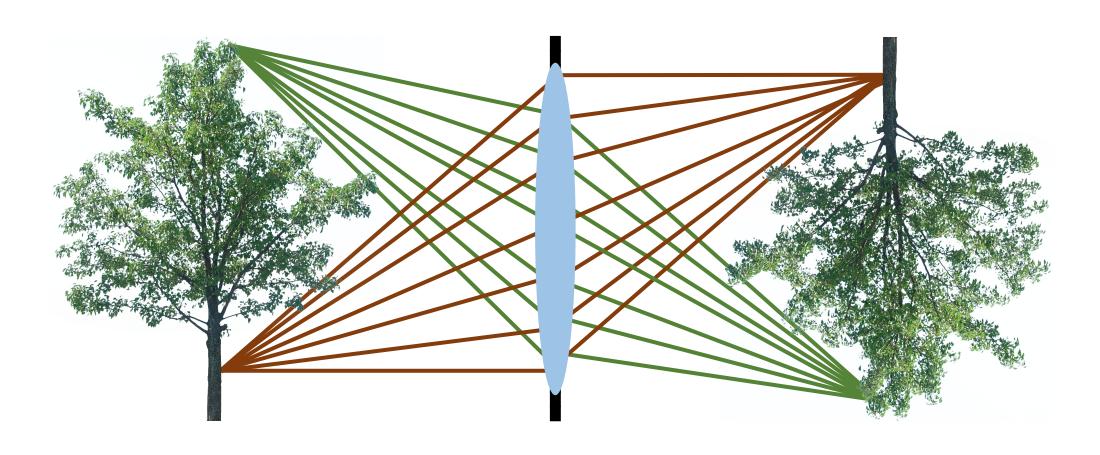

Lenses map "bundles" of rays from points on the scene to the sensor.

How does this mapping work exactly?

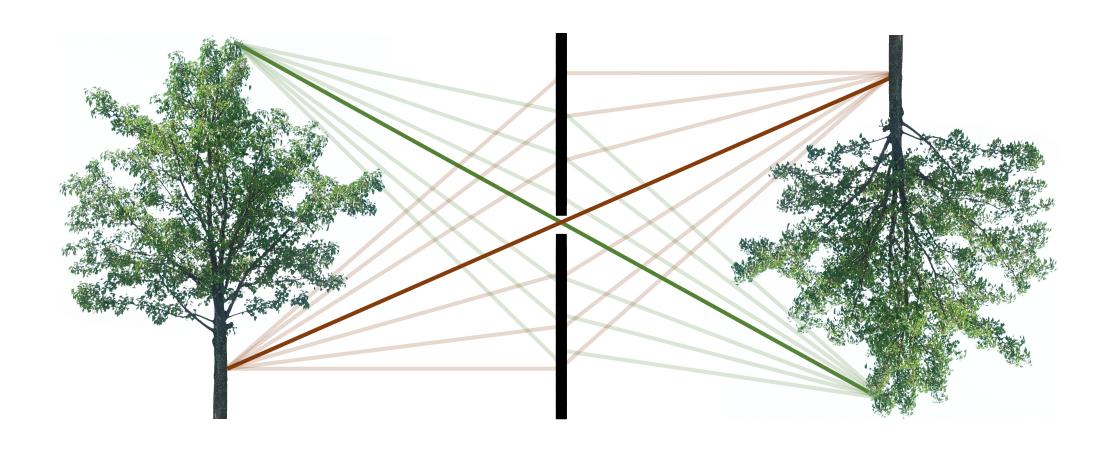

The pinhole camera

The lens camera

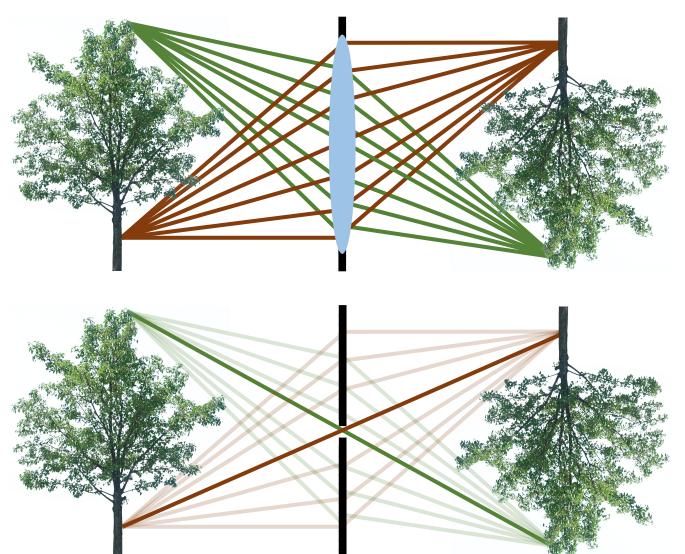

The pinhole camera

Central rays propagate in the same way for both models!

Describing both lens and pinhole cameras

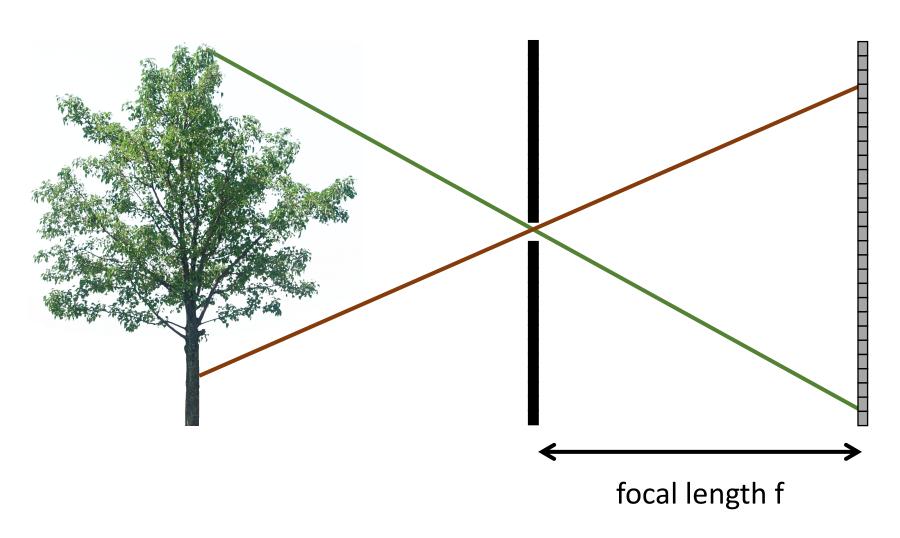

We can derive properties and descriptions that hold for both camera models if:

- We use only central rays.
- We assume the lens camera is in focus.

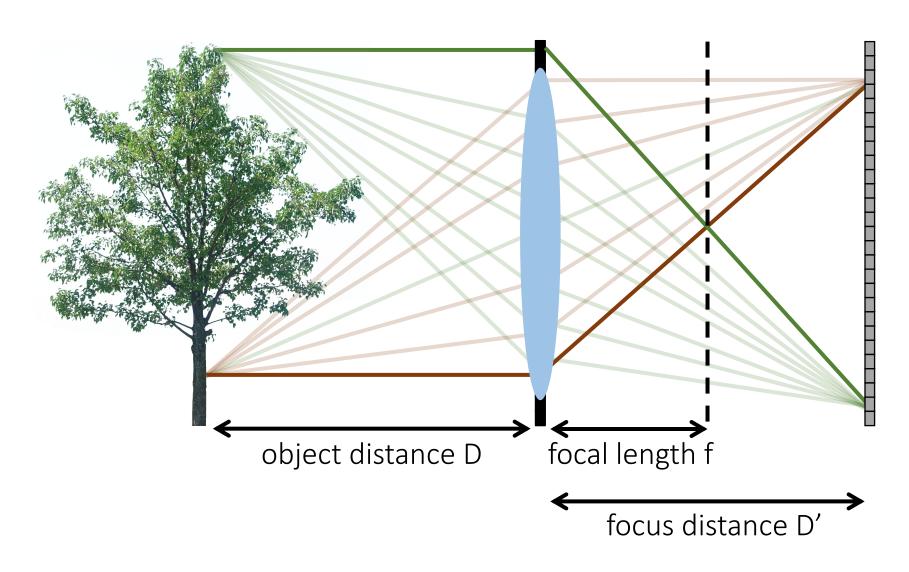

Important difference: focal length

In a pinhole camera, focal length is distance between aperture and sensor

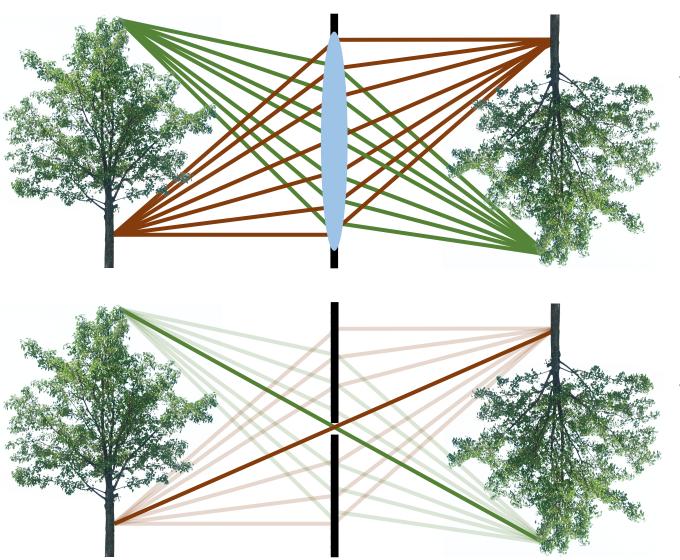

Important difference: focal length

In a lens camera, focal length is distance where parallel rays intersect

Describing both lens and pinhole cameras

We can derive properties and descriptions that hold for both camera models if:

- We use only central rays.
- We assume the lens camera is in focus.
- We assume that the focus distance of the lens camera is equal to the focal length of the pinhole camera.

Remember: focal length f refers to different things for lens and pinhole cameras.

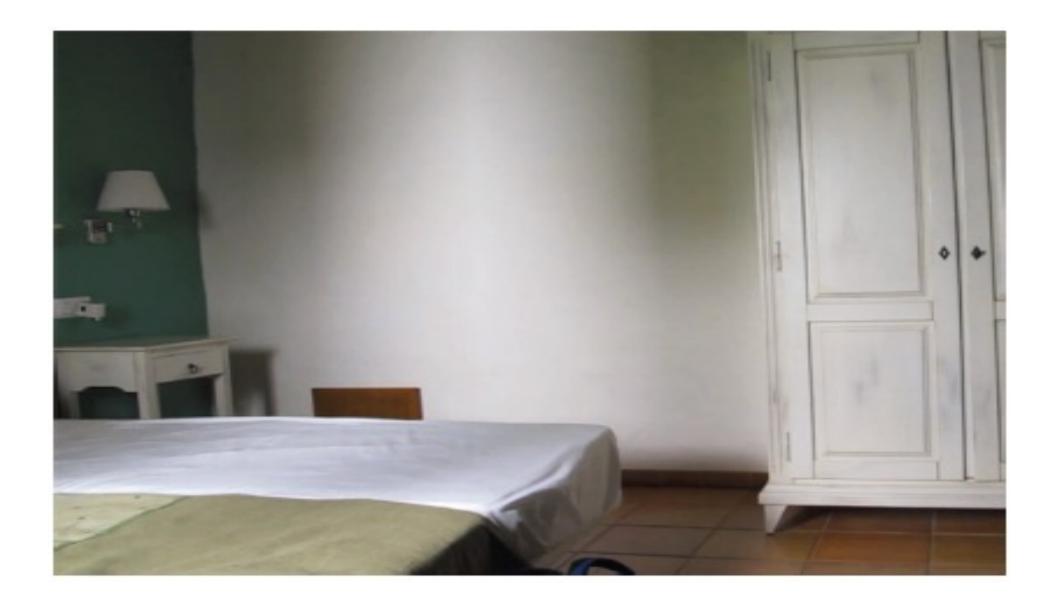

In this lecture, we use it to refer to the aperture-sensor distance, as in the pinhole camera case.

Accidental pinholes

What does this image say about the world outside?

Accidental pinhole camera

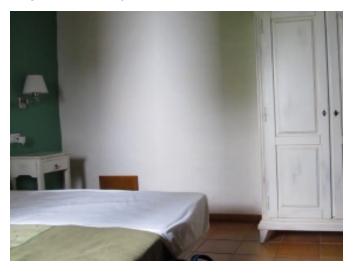

Antonio Torralba, William T. Freeman Computer Science and Artificial Intelligence Laboratory (CSAIL) MIT

torralba@mit.edu, billf@mit.edu

Accidental pinhole camera

projected pattern on the wall

upside down

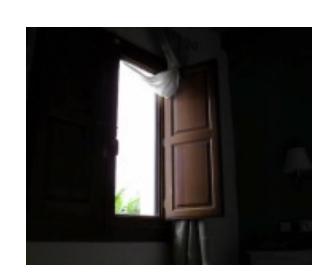

window with smaller gap

view outside window

window is an aperture

Pinhole cameras

What are we imaging here?

Camera matrix

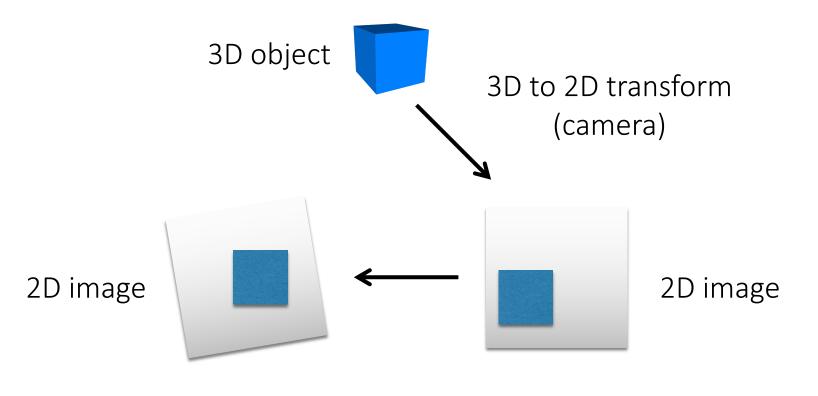

The camera as a coordinate transformation

A camera is a mapping from:

the 3D world

to:

a 2D image

2D to 2D transform (image warping)

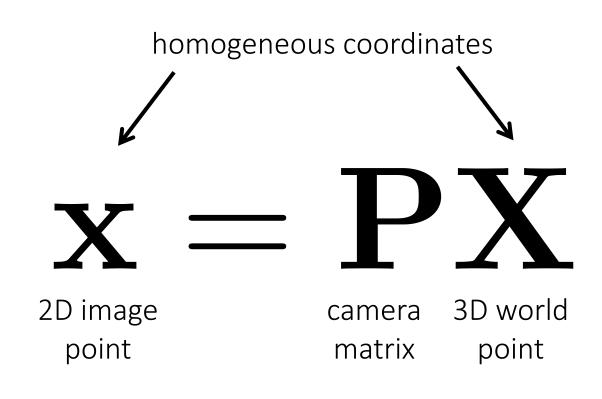

The camera as a coordinate transformation

A camera is a mapping from:

the 3D world

to:

a 2D image

What are the dimensions of each variable?

The camera as a coordinate transformation

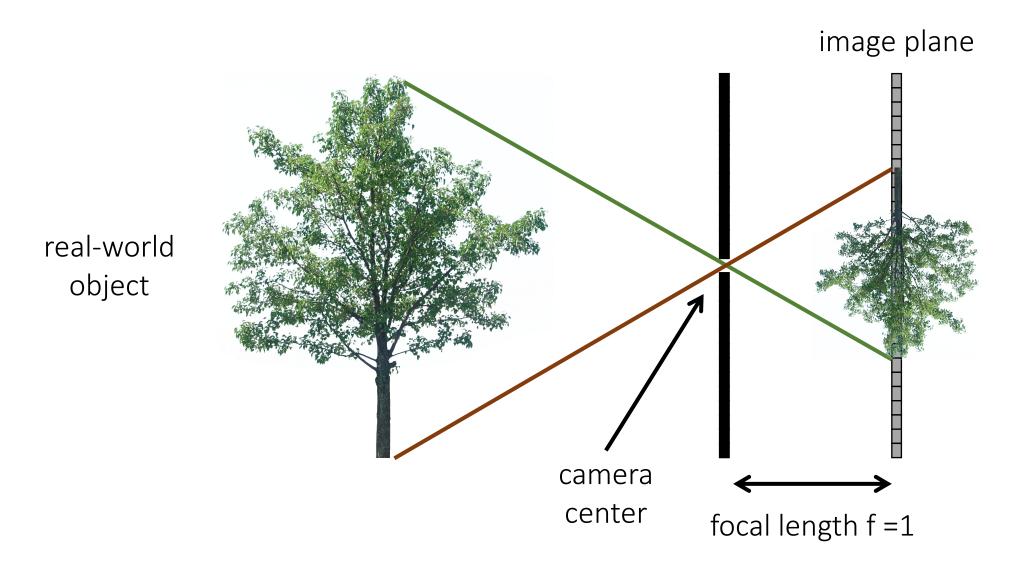

$$x = PX$$

$$\begin{bmatrix} X \\ Y \\ Z \end{bmatrix} = \begin{bmatrix} p_1 & p_2 & p_3 & p_4 \\ p_5 & p_6 & p_7 & p_8 \\ p_9 & p_{10} & p_{11} & p_{12} \end{bmatrix} \begin{bmatrix} X \\ Y \\ Z \\ 1 \end{bmatrix}$$

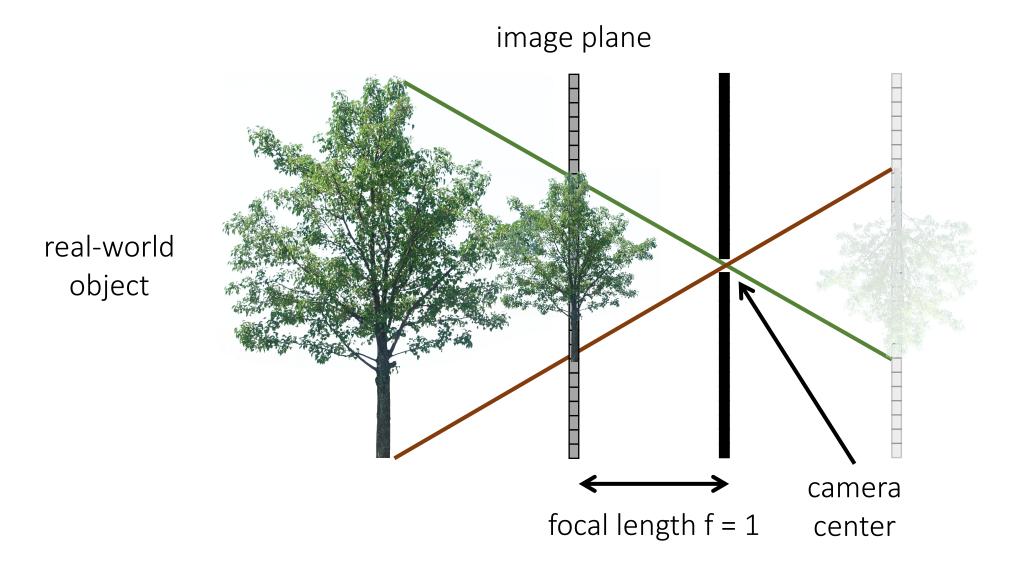

homogeneous image coordinates 3 x 1

camera matrix 3 x 4 homogeneous world coordinates 4 x 1

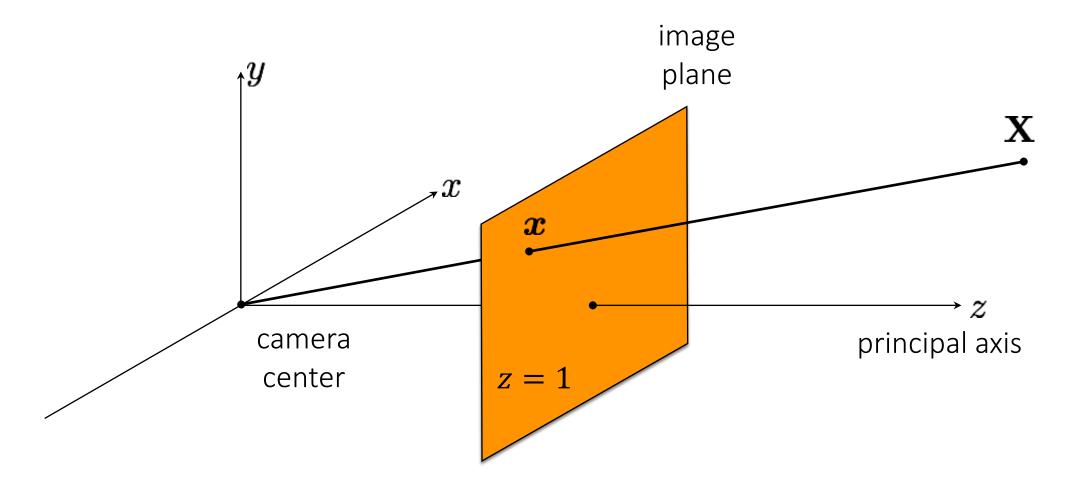

The pinhole camera

The (rearranged) pinhole camera

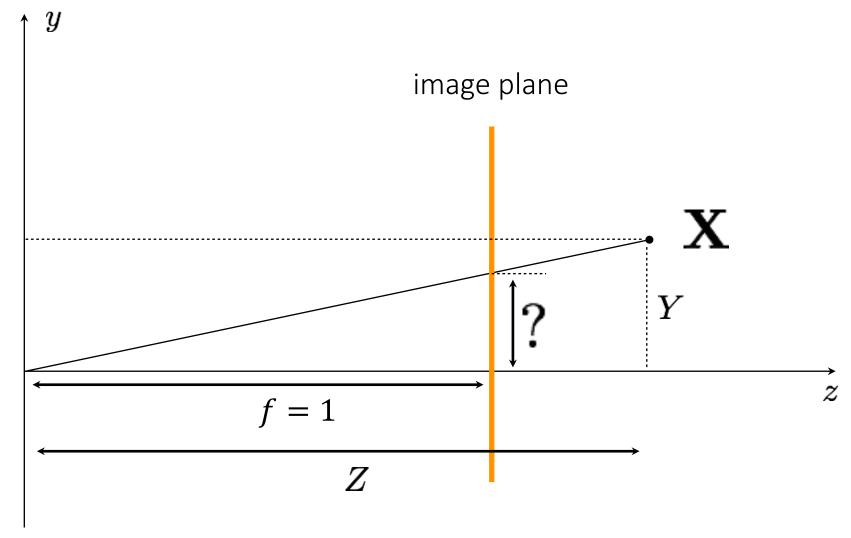

The (rearranged) pinhole camera

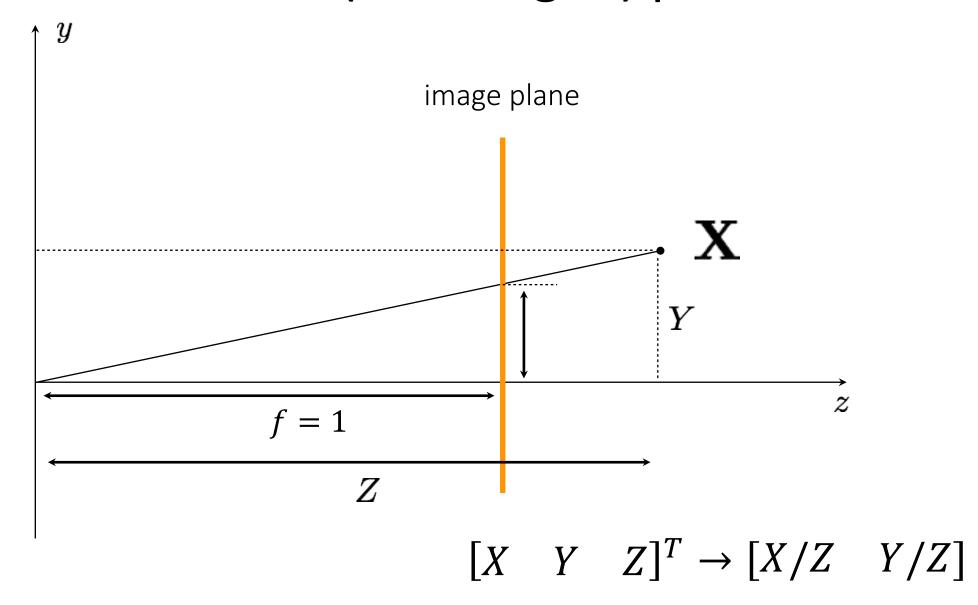

What is the equation for image coordinate x in terms of X?

The 2D view of the (rearranged) pinhole camera

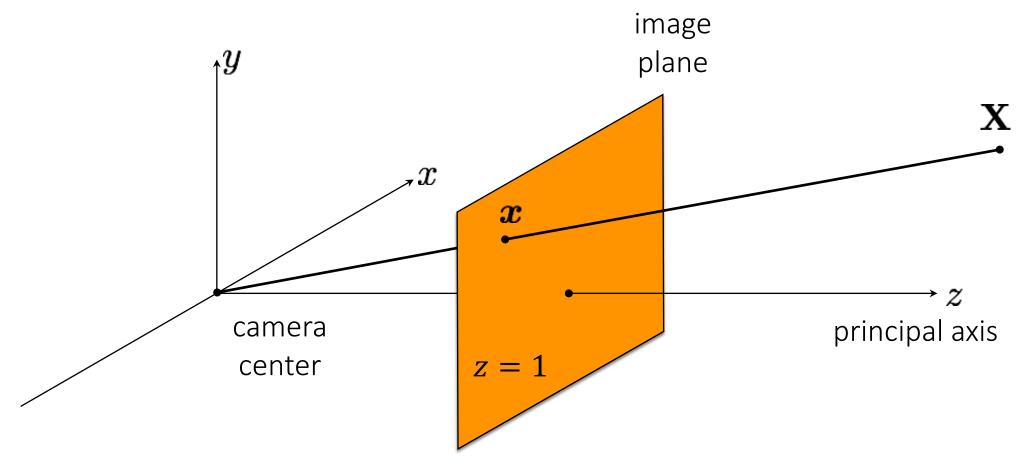

What is the equation for image coordinate x in terms of X?

The 2D view of the (rearranged) pinhole camera

The (rearranged) pinhole camera

What is the camera matrix **P** for a pinhole camera?

$$x = PX$$

The pinhole camera matrix

Relationship from similar triangles:

$$[X \quad Y \quad Z]^T \rightarrow [X/Z \quad Y/Z]$$

General camera model in homogeneous coordinates:

$$egin{bmatrix} X \ y \ z \end{bmatrix} = egin{bmatrix} p_1 & p_2 & p_3 & p_4 \ p_5 & p_6 & p_7 & p_8 \ p_9 & p_{10} & p_{11} & p_{12} \end{bmatrix} egin{bmatrix} X \ Y \ Z \ 1 \end{bmatrix}$$

What does the pinhole camera projection look like?

The pinhole camera matrix

Relationship from similar triangles:

$$[X \quad Y \quad Z]^T \rightarrow [X/Z \quad Y/Z]$$

General camera model in homogeneous coordinates:

$$egin{bmatrix} X \ y \ z \end{bmatrix} &= egin{bmatrix} p_1 & p_2 & p_3 & p_4 \ p_5 & p_6 & p_7 & p_8 \ p_9 & p_{10} & p_{11} & p_{12} \end{bmatrix} egin{bmatrix} X \ Y \ Z \ 1 \end{bmatrix}$$

What does the pinhole camera projection look like?

The perspective projection matrix
$$\mathbf{P}=\left[egin{array}{cccc}1&0&0&0\\0&1&0&0\\0&0&1&0\end{array}
ight]$$

The pinhole camera matrix

Relationship from similar triangles:

$$[X \quad Y \quad Z]^T \rightarrow [X/Z \quad Y/Z]$$

General camera model in homogeneous coordinates:

$$egin{bmatrix} m{\chi} \ m{y} \ m{z} \end{bmatrix} = egin{bmatrix} p_1 & p_2 & p_3 & p_4 \ p_5 & p_6 & p_7 & p_8 \ p_9 & p_{10} & p_{11} & p_{12} \end{bmatrix} egin{bmatrix} X \ Y \ Z \ 1 \end{bmatrix}$$

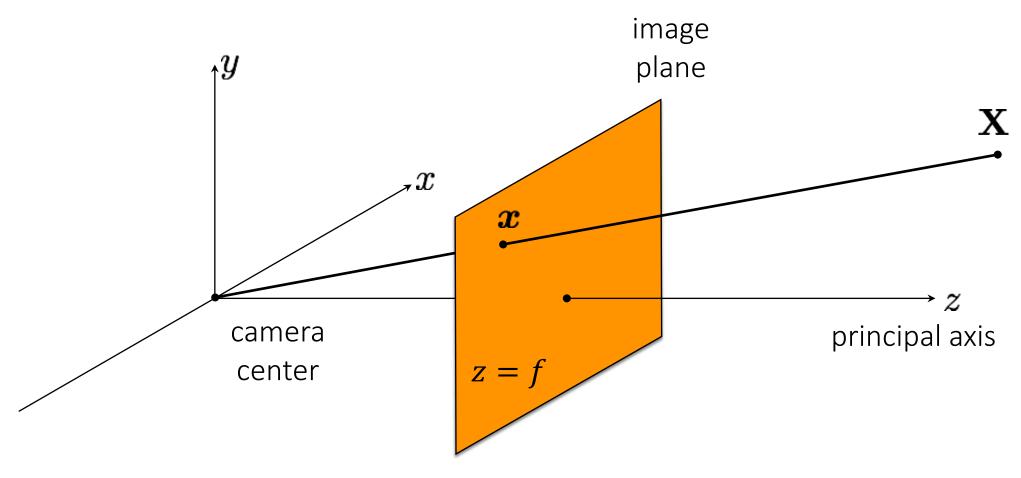

What does the pinhole camera projection look like?

$$\mathbf{P} = \left[egin{array}{ccccc} 1 & 0 & 0 & 0 \ 0 & 1 & 0 & 0 \ 0 & 0 & 1 & 0 \end{array}
ight] = \left[egin{array}{ccccc} \mathbf{I} & oldsymbol{0} \ \mathrm{alternative} \ \mathrm{way} \ \mathrm{to} \ \mathrm{write} \ \mathrm{or} \ \mathrm{$$

$$= [\mathbf{I} \quad | \quad \mathbf{0}]$$

the same thing

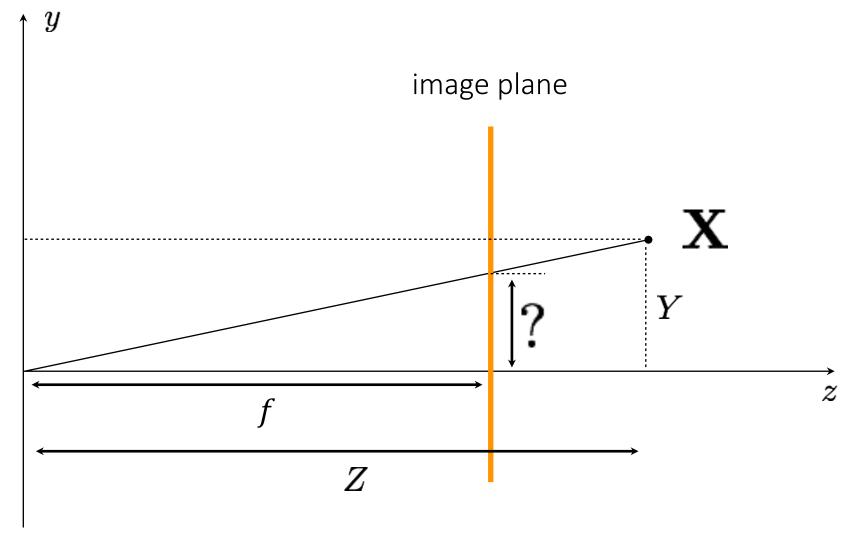

More general case: arbitrary focal length

What is the camera matrix **P** for a pinhole camera?

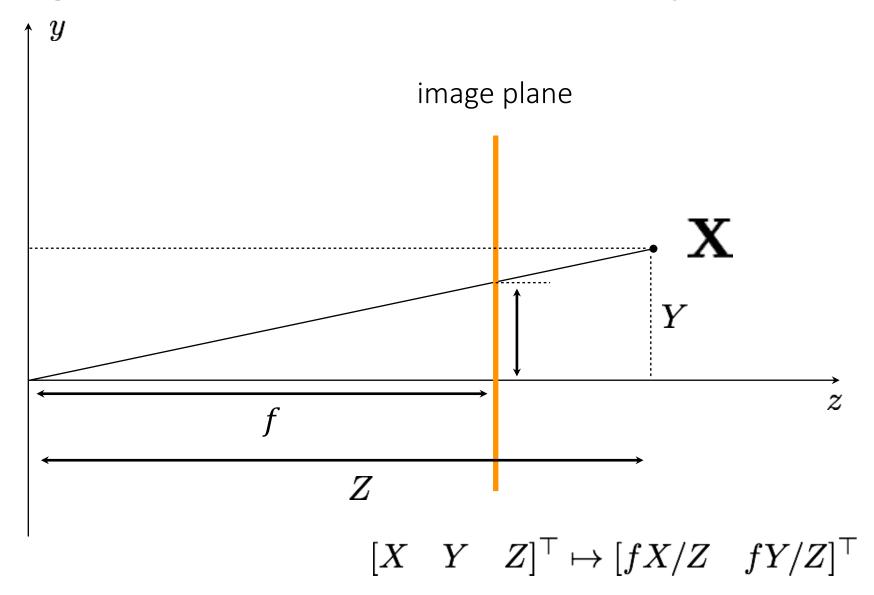

$$x = PX$$

More general (2D) case: arbitrary focal length

What is the equation for image coordinate x in terms of X?

More general (2D) case: arbitrary focal length

The pinhole camera matrix for arbitrary focal length

Relationship from similar triangles:

$$[X \quad Y \quad Z]^{\top} \mapsto [fX/Z \quad fY/Z]^{\top}$$

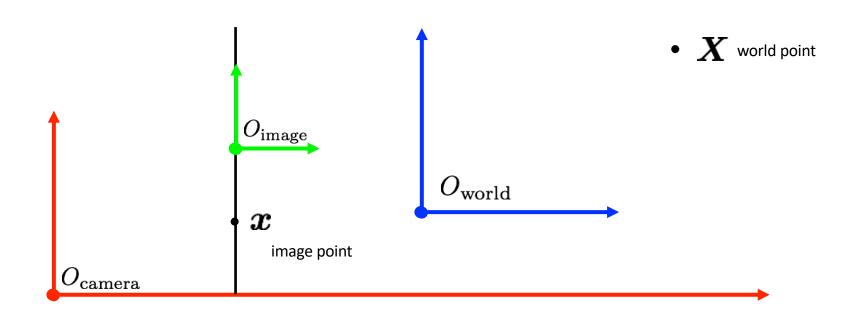

General camera model in homogeneous coordinates:

$$egin{bmatrix} \mathcal{X} \ \mathcal{Y} \ Z \end{bmatrix} &= egin{bmatrix} p_1 & p_2 & p_3 & p_4 \ p_5 & p_6 & p_7 & p_8 \ p_9 & p_{10} & p_{11} & p_{12} \end{bmatrix} egin{bmatrix} \mathcal{X} \ \mathcal{Y} \ Z \ 1 \end{bmatrix}$$

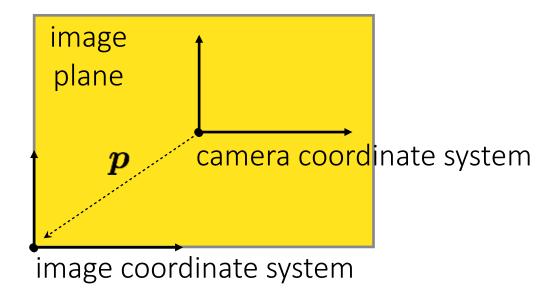

What does the pinhole camera projection look like?

$$\mathbf{P} = \left[egin{array}{cccc} f & 0 & 0 & 0 \ 0 & f & 0 & 0 \ 0 & 0 & 1 & 0 \end{array}
ight]$$

In general, the camera and image have different coordinate systems.

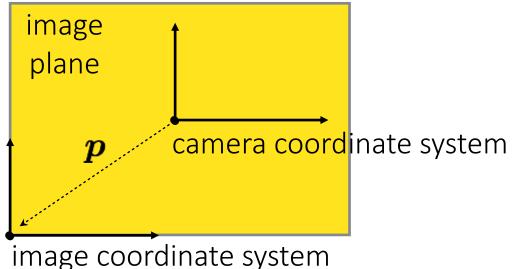

In particular, the camera origin and image origin may be different:

How does the camera matrix change?

$$\mathbf{P} = \left[egin{array}{cccc} f & 0 & 0 & 0 \ 0 & f & 0 & 0 \ 0 & 0 & 1 & 0 \end{array}
ight]$$

In particular, the camera origin and image origin may be different:

How does the camera matrix change?

$$\mathbf{P} = \left[egin{array}{cccc} f & 0 & p_x & 0 \ 0 & f & p_y & 0 \ 0 & 0 & 1 & 0 \ \end{array}
ight]$$

shift vector transforming camera origin to image origin

Camera matrix decomposition

We can decompose the camera matrix like this:

$$\mathbf{P} = \left[egin{array}{cccc} f & 0 & p_x \ 0 & f & p_y \ 0 & 0 & 1 \end{array}
ight] \left[egin{array}{cccc} 1 & 0 & 0 & 0 \ 0 & 1 & 0 & 0 \ 0 & 0 & 1 & 0 \end{array}
ight]$$

What does each part of the matrix represent?

Camera matrix decomposition

We can decompose the camera matrix like this:

$$\mathbf{P} = \left[egin{array}{cccc} f & 0 & p_x \ 0 & f & p_y \ 0 & 0 & 1 \end{array}
ight] \left[egin{array}{cccc} 1 & 0 & 0 & 0 \ 0 & 1 & 0 & 0 \ 0 & 0 & 1 & 0 \end{array}
ight]$$

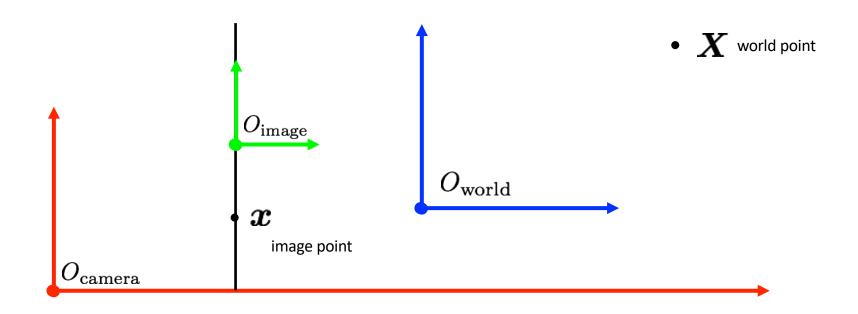

(homogeneous) transformation from 2D to 2D, accounting for not unit focal length and origin shift (homogeneous) perspective projection from 3D to 2D, assuming image plane at z = 1 and shared camera/image origin

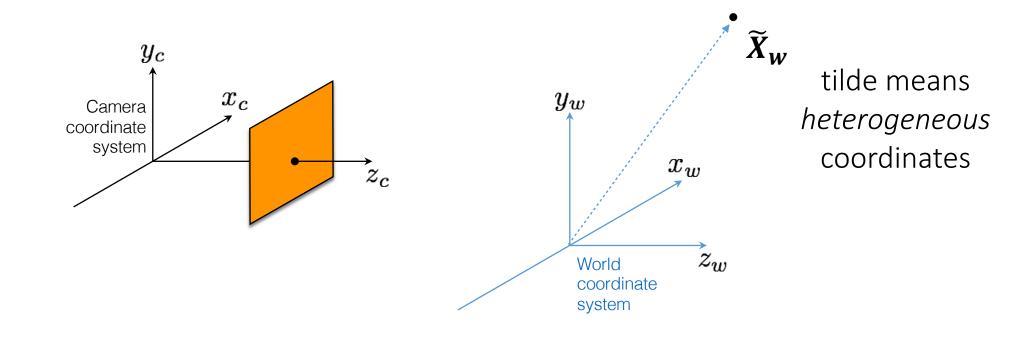

Also written as:
$$\mathbf{P} = \mathbf{K}[\mathbf{I}|\mathbf{0}]$$
 where $\mathbf{K} = \left[egin{array}{cccccc} f & 0 & p_x \\ 0 & f & p_y \\ 0 & 0 & 1 \end{array} \right]$

In general, there are three, generally different, coordinate systems.

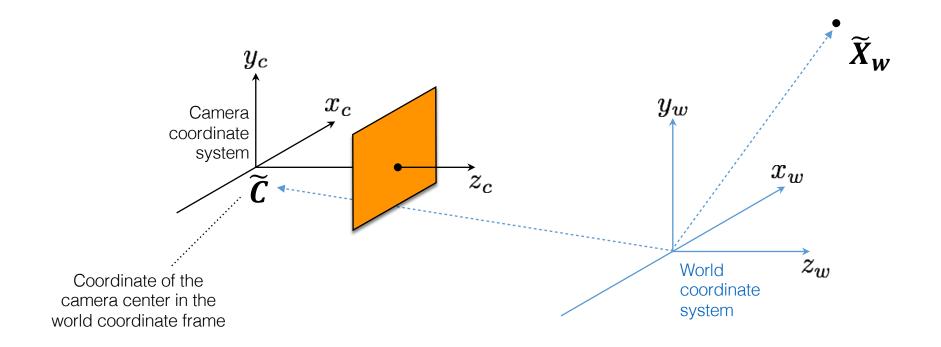

We need to know the transformations between them.

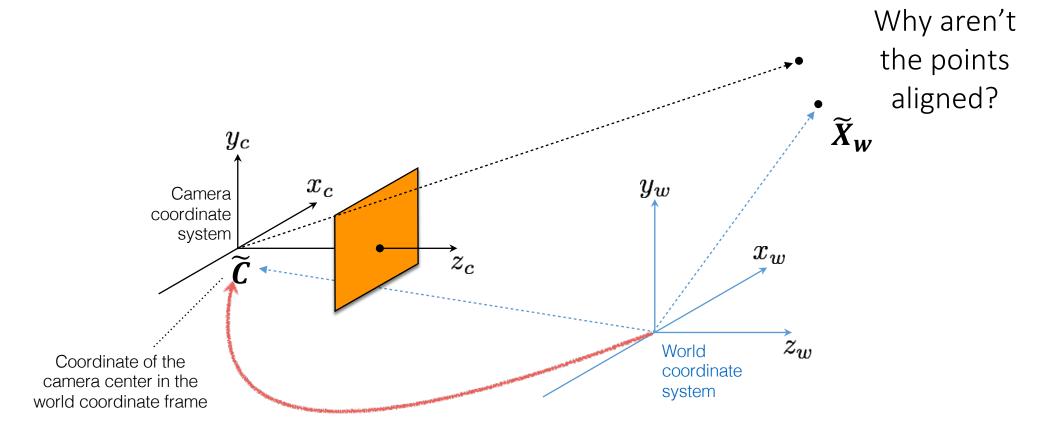

World-to-camera coordinate system transformation

World-to-camera coordinate system transformation

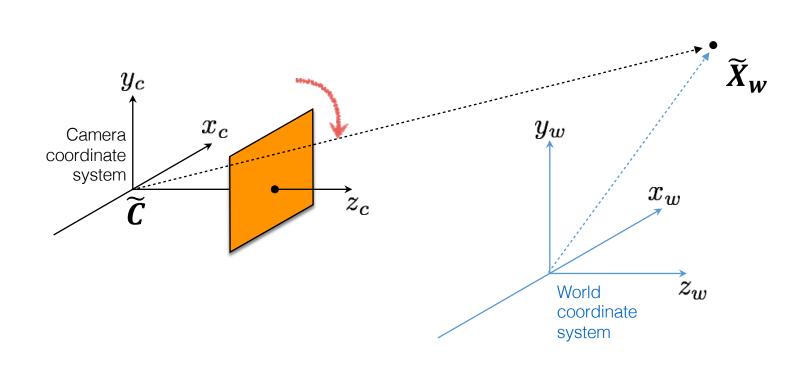

World-to-camera coordinate system transformation

$$(\widetilde{X}_w - \widetilde{C})$$
 translate

World-to-camera coordinate system transformation

points now coincide

$$R \cdot \left(\widetilde{X}_w - \widetilde{C}\right)$$
 rotate translate

Modeling the coordinate system transformation

In heterogeneous coordinates, we have:

$$\widetilde{\mathbf{X}}_{\mathbf{c}} = \mathbf{R} \cdot (\widetilde{\mathbf{X}}_{\mathbf{w}} - \widetilde{\mathbf{C}})$$

How do we write this transformation in homogeneous coordinates?

Modeling the coordinate system transformation

In heterogeneous coordinates, we have:

$$\widetilde{\mathbf{X}}_{\mathbf{c}} = \mathbf{R} \cdot (\widetilde{\mathbf{X}}_{\mathbf{w}} - \widetilde{\mathbf{C}})$$

In homogeneous coordinates, we have:

$$\begin{bmatrix} X_c \\ Y_c \\ Z_c \\ 1 \end{bmatrix} = \begin{bmatrix} \mathbf{R} & -\mathbf{RC} \\ \mathbf{0} & 1 \end{bmatrix} \begin{bmatrix} X_w \\ Y_w \\ Z_w \\ 1 \end{bmatrix} \quad \text{or} \quad \mathbf{X_c} = \begin{bmatrix} \mathbf{R} & -\mathbf{R\tilde{C}} \\ \mathbf{0} & 1 \end{bmatrix} \mathbf{X_w}$$

Incorporating the transform in the camera matrix

The previous camera matrix is for homogeneous 3D coordinates in camera coordinate system:

$$x = PX_c = K[I|0]X_c$$

We also just derived:

$$\mathbf{X_c} = \begin{bmatrix} \mathbf{R} & -\mathbf{R}\tilde{\mathbf{C}} \\ \mathbf{0} & 1 \end{bmatrix} \mathbf{X_w}$$

Putting it all together

We can write everything into a single projection:

$$\mathbf{x} = \mathbf{P}\mathbf{X}_{\mathbf{w}}$$

The camera matrix now looks like:

$$\mathbf{P} = \begin{bmatrix} f & 0 & p_x \\ 0 & f & p_y \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} \mathbf{I} & \mathbf{I} & \mathbf{0} \end{bmatrix} \begin{bmatrix} \mathbf{R} & -\mathbf{R}\tilde{\mathbf{C}} \\ \mathbf{0} & 1 \end{bmatrix}$$
intrinsic parameters (3 x 3):
$$\int perspective \ projection \ (3 x 4):$$

intrinsic parameters (3 x 3): / per
 correspond to camera
internals (image-to-image
 transformation)

erspective projection (3 x 4):
maps 3D to 2D points
(camera-to-image
transformation)

extrinsic parameters (4 x 4): correspond to camera externals (world-to-camera transformation)

Putting it all together

We can write everything into a single projection:

$$\mathbf{x} = \mathbf{P}\mathbf{X}_{\mathbf{w}}$$

The camera matrix now looks like:

$$\mathbf{P} = \left[egin{array}{ccc} f & 0 & p_x \ 0 & f & p_y \ 0 & 0 & 1 \end{array}
ight] \left[\mathbf{R} \quad -\mathbf{RC}
ight]$$

intrinsic parameters (3 x 3):

correspond to camera internals

(sensor not at f = 1 and origin shift)

extrinsic parameters (3 x 4): correspond to camera externals (world-to-image transformation)

General pinhole camera matrix

We can decompose the camera matrix like this:

$$\mathbf{P} = \mathbf{KR}[\mathbf{I}| - \mathbf{C}]$$

(translate first then rotate)

Another way to write the mapping:

$$\mathbf{P} = \mathbf{K}[\mathbf{R}|\mathbf{t}]$$

where
$$\mathbf{t} = -\mathbf{RC}$$

(rotate first then translate)

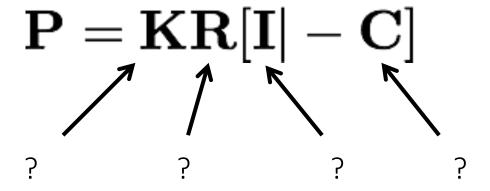

General pinhole camera matrix

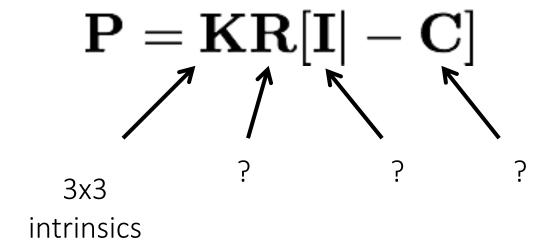

$$\mathbf{P} = \mathbf{K}[\mathbf{R}|\mathbf{t}]$$

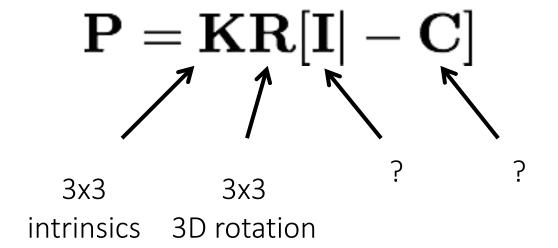

$$\mathbf{P}=\left[egin{array}{cccc} f & 0 & p_x \ 0 & f & p_y \ 0 & 0 & 1 \end{array}
ight]\left[egin{array}{cccc} r_1 & r_2 & r_3 & t_1 \ r_4 & r_5 & r_6 & t_2 \ r_7 & r_8 & r_9 & t_3 \end{array}
ight]$$
 intrinsic extrinsic parameters parameters

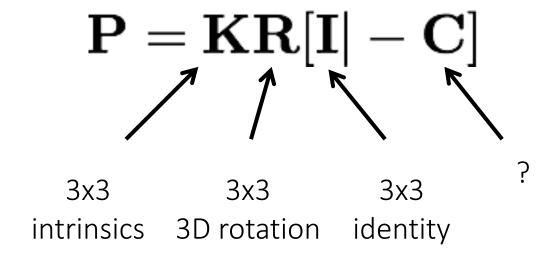

$$\mathbf{R} = \left[egin{array}{cccc} r_1 & r_2 & r_3 \ r_4 & r_5 & r_6 \ r_7 & r_8 & r_9 \end{array}
ight] \hspace{5mm} \mathbf{t} = \left[egin{array}{cccc} t_1 \ t_2 \ t_3 \end{array}
ight]$$

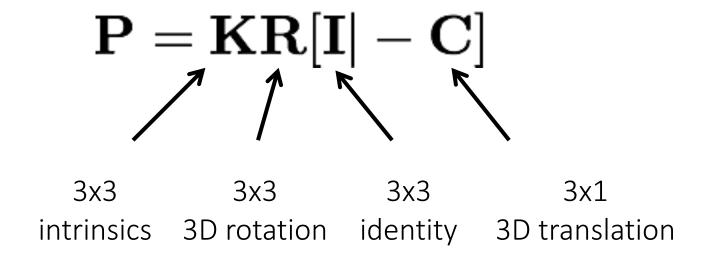

3D rotation 3D translation

The camera matrix relates what two quantities?
